### I-35 SEMI-RECESSED BASIN CUT-OUT TEMPLATE

Please note:due to the way ceramic is manufactured, each basin may vary slightly in size.  
The actual basin should be checked against the worktop before commencing cutting. The size marked on the worktop may need to be changed to reflect the size of the basin.  
If installing this basin on a thick worktop, the cuts at the front of the worktop may need to be angled to reflect the shape of the basin and to prevent a void being visible when installed.  
The basin should be secured in position using a high quality sanitary grade sealant
